Loop of core thread pulled through the picot and S2 through the loop

←This Photo shows five rings completed, and the sixth (split) ring in progress. To do the join on the second half of the split ring, pull a loop of the core thread through the picot you need to join, and then put S2 through the loop.

Next pull the core thread taught so that the S2 thread comes through the picot and forms the first half DS around the core thread. Be sure that the stitches slide correctly so the ring will close. Continue with the second half of the DS, and the remaining stitches of the split ring. →
